

Foreword

The Second International Workshop on Factors Affecting Production of Juvenile Salmon: Survival Strategy of Asian and North American Juvenile Salmon in the Ocean was held at the Conference Hall of Hokkaido University in Sapporo, Japan, on April 26–27, 2006. The Workshop was organized and sponsored by the North Pacific Anadromous Fish Commission (NPAFC). The Workshop Organizing Committee consisted of scientists from Canada, Japan, Republic of Korea, Russian Federation and U.S.A. All necessary arrangements were made by the NPAFC Secretariat in cooperation with the Organizing Committee.

Over 70 scientists, industry representatives, and fisheries officials attended the Workshop. There were 25 oral presentations including five national overviews, followed by a panel discussion, and 24 poster presentations. Extended abstracts of the oral and poster presentations are included in this Technical Report, which also contains opening remarks and short review of the workshop. The material presented in this Technical Report has not been peer-reviewed, and does not necessarily reflect the views of the NPAFC or the member countries. Some work may be preliminary. The material has been edited for clarity and publication purposes only.
